FLEXIBLE SPRINKLER HOSES

Sprinkler Systems are automatic fire sensing and extinguishing systems that splash the water comes through connected pipeline. Public places like shopping malls, theatres, concert halls, hotels where the intervention time is crucial are the places where these systems are commonly chosen and used. Ayvaz sprinkler hose and assembly kit can be effectively used in these systems and come over many con-nection difficulties caused by rigid piping.

Advantages

Flexible structure of stainless steel corrugated hose provides various advantages;

- Hose assembly is not affected by external movements and is able to suspend seismic motions.
- Flexibility of the hose provides required safety for all systems.
- Easy installation the hose and the sprinkler device into ceiling with assembly kit save on installation time and costs by eliminating pipe wastage and reducing the labour associated with cutting, threading, and sealing pipe threads.
- It is so easy to align and tighten sprinkler side of the hose with desired point of ceiling. Also, due to smart design of the fixing kit, sprinkler side of the hose can easily be moved and adjusted on vertical axis.
- It is not necessary to adjust sprinkler location if ceiling alignment and level are changed.
- Stainless steel hose and braiding provide high resistance against heat and temperature.
- The system is highly resistant against corrosive effect of the water that is kept in the hose for a long time.

Installation

Sprinkler systems are used for fire protection purposes which switch on automatically as soon as a fire starts up and splash water on to the flames to extinguish the fire. These systems are located very close to the roof and collect water by the connected pipelines. Sprinkler systems are especially preferred in the big buildings open to the public where access is difficult and with heavy fire interference.

FLEXIBLE SPRINKLER HOSES

PART LIST										
Item	Material List	Part Name								
1	Galvanized Coated Carbon Steel	Raccord								
2	Stainless Steel AISI 316	Hose								
3	Stainless Steel AISI 304	Wire Braiding								
4	Galvanized Coated Carbon Steel	Nipple

Product Material

Min. Bending Radius: 200 mm These products can be used accordance with NFPA 13, 13D and 13R standards.

Ceiling Specifications

These connections are designed for using in ceilings tile grids that meet ASTM C 635 and ASTM C 636 referenced by the IBC.

Light-Duty Systems, Intermediate-Duty Systems and Heavy-Duty Systems are structural classifications. These connections have been approved for using in all Intermediate-Duty and Heavy-Duty structural classifications.

FLEXIBLE SPRINKLER HOSES

UL, FM and VdS APPROVED CONNECTION

Material List										
Part Number	Part Name	Material								
1	Assembly Bar	Galvanized coated St. 37.2								
2	Fixing Bolt	Carbon Steel 8.8								
3	Kit Fixing Part	Galvanized coated St. 37.2								
4	Sprinkler Hose	Stainless Steel								
5	Hose Fixing Part	Galvanized coated St. 37.2								

STEP 1 (Connecting the hose to the water line)

The nipple side of the sprinkler hose is connected and tight-ened to the connection nut on the fire line. The conical nut thread provides proper sealing without using gasket.

STEP 2 (Attaching the fixing parts to the metal grid)

Two fixing parts are attached on both sides of the metal grid as them to face each other and gently tightened. Do not tighten too much in case further adjustments may be re-quired.

STEP 3 (Placing the assembly bar)

Slide the assembly bar through one of the fixing parts and push it to the opposite direction at the same plane until the unattended end of the bar goes through the hose fixing part and the opposite kit fixing part. Place the assembly bar as leaving equal distance at both sides and screw the bolt and gently tighten.

STEP 4 (Tightening the sprinkler connection set)

As the sprinkler connection set is complete and the sprinkler side is aligned with the hole on the ceiling. The bottom bolts of the fixing parts on both sides of the assembly bar are tight-ened. Tightening torque: 8N

FLEXIBLE SPRINKLER HOSES

UL, FM and VdS APPROVED CONNECTION

STEP 5 (Connecting the hose to the water line)

After fixing the nipple part, use Minimum Bend Radius Tool to be sure to bend the hose according to minimum bending radius.

STEP 6 (Adjusting the sprinkler head's position)

The bolts of hose fixing part on the assembly bar are loosen a little bit and the position of the hose outlet is adjusted as it fixed at the desired level according to the ceiling surface. Tighten the bolts back and complete the assembly. Tightening torque: 8N

STEP 7 (Connecting the sprinkler head)

The sprinkler head is connected to the sprinkler end of the hose and the escutcheon is tightened. The conical thread of the sprinkler head and the hose nut provide desired sealing with using no gaskets.

STEP 8

After, completing the sprinkler hose assembly. The system must be tested in order to detect possible water leaks. Any leaks must be prevented immediately for maximum service life and protection against the hazards.

DOUBLE GIMBAL EXPANSION JOINTS & SEISMIC EXPANSION JOINTS

Gimbal type expansion joints are designed to permit angular rotation in any plane by the use of two pairs of hinges affixed to a common floating gimbal ring.

Simply, a double gimbal expansion joint is consisted of two single gimbal expansion joints and an intermediate pipe connects them each other. The advantage of this arrangement is the ability to absorb a large lateral movement in any plane at each end.

Restrained Expansion Joints

Thrust force caused by the internal pressure is needed to be absorbed in order to keep the achors free from this force is some cases.

Restraining parts like tie rods, higes or gimbals are designed (number & dimensions etc...) according to the pressure thrust.

Expansion joints produced with these restraining parts are called restrained expansion joints. Restrained lateral expansion joints must be free from axial movements and to be adjusted only for lateral movements.

Movement Absorption & Seismic Movement

Classical double gimbal expansion joints are used to absorb lateral & angular deflections in all planes.

The gimbals of this expansion joints are designed as to withstand against pressure thrust and they are called restained type expansion joints.

The amount of lateral deflection depends on the convolution number of the bellows on each side and the length of the intermediate pipe.

Standard range of Ayvaz double gimbal expansion joints are designed mostly for fire protection lines where the deflections are not caused by thermal movements but seismis movements. In order to absorb the axial movements caused by the seismic movements, Ayvaz standard range expansion joints are finished with an axial movement capacity which is limited by the slot gap on the gimbals.

Advantages of Double Gimbal Seismic Expansion Joints

Protects the pipeline systems against collapse and breakages by compensating seismic motions (earthquake) and large lateral and angular movements.

FM approval for the safety features to be used at fire protection pipelines.

Bellows design according to EJMA coding system.

Construction according to EN14917 standard.

Large lateral movements by single expansion joint

DOUBLE GIMBAL EXPANSION JOINTS & SEISMIC EXPANSION JOINTS

Application Areas

Fire Protection HVAC piping lines Exhaust Systems Vibration absorption Industrial process & applications Power generation & Energy plants

DESIGN (EN 14917)

Bellow Material	: Stainless Steel AISI 321 (opt.304,316L,316TI,309)
Connection Types	: Fixed and Folating Flanged, Welded Ended & Grooved
Flange Material	: PN 16, St.37.2 as standard, the material can be customised on request
Inner Sleeve	: Available in stainless steel AISI 321 (opt.304,316L,316TI,309) on request
Accessories	: Inner sleeve, cover, counter flange, gaskets, insulation etc. are available on request.
Certificates	: Material certificate 3.1 according to EN 10204 and /or ASME
	: PED 2014/68/EU Cat.I Mod.A

Operation Conditions

Operating Temperature Operating Pressure	: -10C°/+550C° : Standard pressure rating is PN16 Can be produced with different pressure rates PN 2,5-63 PN corresponds to the allowable operating pressure at room temperature
Important	: Standard models are produced as un-restrained, fixed points should be created as to withstand springing force as well as pressure thrust caused by the system pressure. For detailed information, get in contact with Ayvaz's expert sales team. We strongly advise against the use of expansion joints and bellows for misalignment. Torsion on bellow parts are not desirable and should be eliminated.

Double Gimbal Expansion Joints

SEISMIC EXPANSION JOINTS & INSTALLATION

During a seismic motion, the pipelines are affected from the unforecasted movements just like the buildings. The most important points to be protected during such an event is the dilatation points.

What is Dilatation Point?

Modern buildings are consisted of multiple independent sections the areas between two building is called dilatation point.

The pipelines are goes through from one building to another should be protected with seismic motion absorption joints.

Why are the dilatation ponts so important?

Because of the different arcitectural and constructional features as well as the geological characteristics of the bases, the movements of buildings may differ.

So, pipeline costructors should use 3D motion absorber at these areas. Appropriate expansion joints must be installed to the pipelines underneath the dilatation points.

Purpose of Dilatation Seismic Joints?

This type of expansion are able to make movement in all three axis.

The movement amount must be selected according to building displacement amount.

Gimbals on the expansion joints are not used for making the joints restrained againts the pressure thrust, only for limiting the axial movement capacity.

A gap which is equal to the movement amount of the expansion joint should be left between the joint and the construction elements like walls and ceiling.

Both ends of the expansion joint should be fixed to each building with the distance of 4D.

Example

In case of a dilatation expansion joint with 100mm lateral deflection capacity to be installed at the dilatation point of 2 buildings, The expansion joint should be placed in minimum 100mm distance from the ceiling, each ends should be fixed within 400mm.

BRAIDED LOOP JOINTS (U-TYPE)

The loop joint is designed to move in any direction making it a simple,all-in-one joint for a variety of applications. There's no limit to the seismic applications that loopjointscan handle. It can even be designed with lined hose for high velocity, double-braid for high pressures, and all stainless steel construction for media compatibility.

Loop Joint use for Seismic Protection

Piping used in applications and locations subject to seismic conditions have their own set of unexpected random movements and greater costs to overcome. The random motion common to earthquakes requires that seismic expansion joints be capable of movement in any direction. Of the 6 possible directions. Ayvaz Loopjoint's orientation can be changed relative to the piping, further minimizing the likelihood of compressive movement.

Advantages of Braided Loop, Seismic Expansion Joints

Loop joint offers significant cost and safety benefits not found in comparable seismic expansion joints FM approval for the safety features to be used at fire protection pipelines. Bellows design according to EJMA coding system. Construction according to EN14917 standard. Large lateral movements by single expansion joint

Application Areas

Fire Protection HVAC piping lines Industrial process & applications Power generation & Energy plants

DESIGN (EN 14917)

Bellow Material	: Stainless Steel AISI 304 (opt. 321, 316L, 316TI, 309)
Braiding Material	: Stainless Steel AISI 304
Connection Types	: Folating Flanged, Welded Ended, Grooved & Threaded
Flange Material	: PN 16, St.37.2 as standard, the material can be customised on request
Certificates	: Material certificate 3.1 according to EN 10204 and /or ASME FM certificate

BRAIDED LOOP JOINTS (U-TYPE)

Operation Conditions

Operating Temperature Operating Pressure	: -10C°/+550C° : Standard pressure rating is 175psi and 250psi Can be produced with different pressure rates PN 2,5-63 PN corresponds to the allowable operating pressure at room temperature
Important	: Standard models are produced as un-restrained, fixed points should be created as to withstand springing force as well as pressure thrust caused by the system pressure. For detailed information, get in contact with Ayvaz's expert sales team. We strongly advise against the use of expansion joints and bellows for misalignment. Torsion on bellow parts are not desirable and should be eliminated.

MOTION OF BRAIDED LOOP JOINTS

The loop joint is designed to move in any direction making it a simple, all-in-one joint for a variety of applications. There's no limit to the seismic applications that loop joints can handle. It can even be designed with lined hose for high velocity, double-braid for high pressures, and all stainless steel construction for media compatibility.

Axial compression

and extension

"Z" axis

Pc

Non-parallel offset "Y" axis

CONNECTION TYPES OF LOOP JOINTS

Horizontal Connection (Hanging Down)

Loop should hang straight down and be free to flex. Guides are required to direct movement axially.

Horizontal Connection (Straight Up)

Support must be provided to prevent the loop from leaning. Pipe hanger rod should be loose enough to allow the 180° return to move up or down 1/4" as the loop flexes. Guides are required to direct movement of pipe axially.

Horizontal Connection

This installation is recommended for steam. Support must be provided to prevent the loop from drooping or torquing pipe. Support must allow the 180° return, to move horizontally back and forth 1/4", as the loop flexes. Guides are required to direct movement of pipe axially.

AYVAZ

MOTION OF BRAIDED LOOP JOINTS

Vertical Connection

Loop must be supported to allow the 180° return to move horizontally back and for 1/4" as the loop flexes. Guides are required to direct movement of pipe axially.

Nested Connection

For tight pipe runs, any size or number of loops can be designed to nest inside of one another.

Inside Corner Connection

Single loop joint simultaneously absorbs the thermal expansion of two pipe runs.

Space-saving inside corner joint connection eliminates the need for an anchor at the corner.

Guides are required to direct movement of pipe axially. Support must be provided to prevent loop joint from drooping or torquing pipe and must allow for sufficient movement.

Over-Under Connection

The loop joints expansion loop can be manufactured in a variety of configurations.

Over-Over Connection

The loop joints expansion loop can be manufactured in a variety of configurations

AYVAZ LOOP JOINTS INSTALLATION INSTRUCTIONS

1. Ayvaz loop joints can be connected to pipeline with welding ends, flanges or grooved connection mounts through rigid or flexible couplings.

2. Loop joints can be installed in any position with maximum efficiency.

3. For the Loop joint assemblies smaller than 2" (DN50), no support is required.

4. For the loop joint assemblies bigger than 2" (DN50). If the assembly is hanged down vertically, no support is required. For other type of connections, supporting operation may be done in two different ways. For the +/- 4" (100mm) movement of loop joints, a hanger rod which is 12" (300mm) or greater will allow the loop to swing properly in order to maintain the security of the assembly.

In case that the loop joint is forced to be installed with hanging rod that is shorter than recommended distance above, it is suggested to use a spring hanger. Spring type of hangers may provide the required flexibility to the assembly during seismic motions.

5. Loop joint assemblies are supplied with spreader bars to prevent misalignments during installation. This bar should be removed after installation.

6. Loop joint assembly must be cleared 4" (100mm) from all around the assembly.

7. If the loop joint assembly can't meet the building's seismic separation, it is suggested to install it with the closest elbow less than 24" (600mm) from seismic separation.

8. If the loop joint assembly is to be installed in vertically upright position (180° elbow, over the pipeline), the entrapped air should be removed.

- : 3/4" BSPT (3/4" NPT) : 1" BSPT (1" NPT) : 205mm (8") : 50mm (2") : Red Paint : 3.0 kg

SPRINKLER WATER MOTOR GONG MODEL - AG

AYVAZ Sprinkler Alarm is a hydraulically driven mechanical bell. It does sound a continuous alarm when the sprinkler system operates. The impeller and drive shaft are energy efficient, made from light weight nonmetallic material and do not require any external lubrication. The gong, protection cover and motor housing are made of corrosion resistant aluminium alloy.

Retarding Chamber / Model RC9

Carlos contest and

Water Working Pressu	re: 17.5 bar (250 PSI)
Material	: Stainless Steel
Connection	: 3/4" BSPT (F
Weight	: 2.6 kg

For use with AYVAZ Alarm Valve Model AIAV

RETARDING CHAMBER AYVAZ-RC9

Retarding Chamber is used with Alarm Valve Trim in the system. It is a holding tank to prevent activation of the Sprinkler Alarm during water pressure surge, but permits the activation of alarm on sustained flow. The Retarding Chamber is part of UL Listed and FM Approved Alarm Valve Trim. The Retarding Chamber is made of stainless steel material and rated for 17.5 bar pressure.

ALARM PRESSURE SWITCHES

Model EPS10

EPS10 Series switches are designed for use in wet, dry, deluge and pre-action automatic sprinkler systems to indicate a discharge from a sprinkler.

SUPERVISORY SWITCHES

OS&Y Supervisory Switch / Model OSY2

Specifications

Maximum Operating Pressure

The AYVAZ OSY2 is used to monitor the open position of an Outside Screw and Yoke (OS&Y) type gate valve.

Features

- NEMA 3R-rated enclosure
- User-friendly mounting bracket fits newer valve yokes
- Single side conduit entry does not require right angle fittings
- Adjustable length actuator eliminates the need for cutting the shaft
- Accommodates up to 12 AWG wire
- Three position switch monitors vandal and valve close signals
- Two SPDT contacts are enclosed in a durable terminal block for added strength
- 100 percent synchronization activates both alarm panel and local bell simultaneously

33	[
Maximum Adjustment Pressure Range Differential Factory Setting Switch Contact Ratings	: 4 to 20 psi : Approximately 3 psi throughout range) : Operates at rising pressure 4 to 8 psi : EPS10-1: One set SPDT (Form C) EPS10-2: Two sets SPDT (Form C)1 0.0 A, ½ H P @ 125/250 VAC 2.5 A @ 6/12/24 VDC
Pressure Connection	: 1/2" NPT male glass reinforced nylon
Operating Temperature Range	: Indoor or outdoor use:-40°F to 160°F (-40°C to 71°C)
Cover Tamper Switch Enclosure	: UL Models: Optional P/N 546-8000 ULC Models: Factory Installed : Rated UL 4x, NEMA 4 for indoor or outdoor use
Shipping Weight	: 1.2 lbs. (.54 kg)

POST INDICATOR

Vertical Type Post Indicator / Model A-VPI

88

ΉF

Vertical indicator post provides a means to operate a
buried or otherwise inaccessible valve and able to indicate
the open or shut position of the valve.

For use with 4" to 12" NRS indicating post gate valve

Weight: 90 kg.(198,36lbs.)

Field Adjustment:

- 1- Remove the Top Section from the top of the Indicator Post assembly;
- 2- Cut the required stem length
- 3- Set the "OPEN" and "SHUT" targets for the appropriate valve size;
- 4- Reattach the Top Section to the top of the Indicator Post assembly.

C

POST INDICATOR

Wall Type Post Indicator / Model A-WPI

Wall indicator post provides a means to operate a valve installed behind a wall and able to indicate the open or shut position of the valve.

NOTE: Ensure that the non-rising stem gate valve is in the fully open position before installing the Wall Post Indicator.

For use with 4" to 12" NRS indicating post gate valve

Weight: 40,8kg.(90lbs.)

Field Adjustment:

- 1- Remove the Top Section from the top of the Indicator Post assembly;
- 2- Cut the required stem length
- 3- Set the "OPEN" and "SHUT" targets for the appropriate valve size;
- 4- Reattach the Top Section to the top of the Indicator Post assembly.

Meter Device

Body	: Aluminium
Operation	: Diaphragm
Accuracy	: +%2 Full Scale
Temperature	:80°C
Pressure	: 500PSI
Weight	:1.7kg
Size	: 4" Dial

Installation

Operating instructions

- 1- Close system valve
- 2- Open system by-pass valve and throttle valve
- 3- Purge meter located on venturi as follows:
 - Open shut-off valves & vent valves.
 - When a steady stream of water is passing through Each plastic hose, the meter is purged of air.
 - Close vent valve after purging.
- 4- Start fire pump, read meter in gpm/lpm
- 5- Refer to pump gpm/lpm requirement and adjust Throttle valve for this requirement.
- 6- After test open system valve and close system By-pass and throttle valves.

WATERFLOW DETECTOR

Waterflow Detector Threaded / Model WFDTN

Features

- Residential sprinkler systems
- Sealed retard mechanism
- Visual switch activation
- Rugged, dual SPDT switches enclosed in a durable terminal block
- Easy to install and maintain design
- Vertical or horizontal mount
- Field replaceable retard mechanism and switch assembly
- Twelve different flexible paddles
- Durable, tamper resistant enclosure
- Two conduit openings
- Handy depth gauge
- Accommodates up to 12 AWG wire
- 100% synchronization fires alarm panel and local bell simultaneously

Design. The design of the WFDTH makes it easy to install and simple to maintain. It can be mounted in the vertical or horizontal position. Two conduit openings permit easy attachment to the local alarm system. The retard mechanism and switch assembly are fieldreplaceable.

Features. Twelve different flexible paddles fit 1", 1.", 1.", and 2" tees. Sizes are marked clearly on the paddle for ease of installation. Plastic paddles slip over the actuating lever and are securely fastened with one screw. The handy depth gauge insures the proper installation depth and clearance of the detector to the tee.

Construction. The WFDTH inchludes a durable and tamper resistant enclosure. Its sealed retard assures that the delay mechanism is not contaminated by dust and dirt when the cover is removed. The long lasting cover completely encloses the electrical components to further keep out dust and dirt. Improved self-guiding security screws and removal tools make detectors resistant to tampering and simplify field maintenance.

Specifications

Static Pressure Rating	: 250 PSI (max.)
Maximum Surge	: 18 FPS
Triggering Threshold Bandwidth (Flow Rate)	: 4–10 GPM
Overall Dimensions, Installed	: 11.4cm H × 9cm W × 17cm L
Contact Ratings	: Two sets of SPDT (Form C) — 10.0 A @ 125/250 VAC — 2.5 A @ 24 VDC
Compatible Tee Fittings	: Threaded ferrous and brass tees, copper
	Sweat tees, CPVC tees, and polybutylene tees
Conduit Entrances	: Two openings for 1/2" conduit
Operating Temperature Range	: 32°F to 120°F (0°C to 49°C)
Enclosure Rating	: UL listed for indoor use
Cover Tamper Switch	: Canadian models only, factory installed
Service Use	: Automatic Sprinkler: NFPA 13
	One or Two Family Dwelling: NFPA 13D
	Residential Occupancies up to 4 Stories: NFPA 13R
	National Fire Alarm Code: NFPA 72
Shipping Weight	: 1.2 kg

Manufactured by System Sensor who have the FM Approval and UL Listing

Delay Adjustment Deal

NOTE: Retard time may exceed 90 seconds. Adjust and verify that time does not exceed 90 seconds.

WATERFLOW DETECTOR

Waterflow Detector U Bolted / Model WFD

Features

- UL-listed models are NEMA 4 rated
- The WFD series is compatible with schedule 10 through 40 steel pipe, sizes

2" through 8", and can be mounted in a vertical or horizontal position.

- Sealed retard mechanism immune to dust and other contaminants
- Visual switch activation
- Field-replaceable retard mechanism and SPDT switches
- Rugged, dual SPDT switches enclosed in a durable terminal block
- Accommodates up to 12 AWG wire
- Designed for both indoor and outdoor use
- 100 percent synchronization activates both alarm panel and local bell
- Tamper-resistant cover screws

Robust Construction. The WFD series consists of a rugged, NEMA 4-rated enclosure. Designed for both indoor and outdoor use, the WFD series operates across a wide temperature range, from 32°F to 120°F.

Reliable Performance. UL-listed models are equipped with tamper-resistant cover screws to prevent unauthorized entry. Inside, two sets of SPDT (Form C) synchronized switches are enclosed in a durable terminal block to assure reliable performance.

False Alarm Immunity. The WFD series inchorporates a mechanical retard feature, which minimizes the risk of false alarm due to pressure surges or air trapped in the sprinkler system. In addition, the mechanical retard's unique sealed design is immune to dust and other contaminants.

Simplified Operation. The WFD series is designed to simplify installation. Two conduit openings permit easy attachment to the local alarm system. The retard mechanism and dual SPDT switches are field-replaceable.

PRESSURE REDUCING VALVE

Globe Type / Model 90G-21 Angle Type / Model 90A-21

Features

- Globe or Angle Pattern
- Proven Reliable Design
- Available in Cast Bronze and Ductile Iron
- Accurate Pressure Control
- In Line Service
- Flanged and Grooved Ends

The Model 90G-21 (globe) and 90A-21 (angle) Pressure Reducing Valves are indispensable in any fire protection system. The diaphragm actuated design is proven highly reliable and easy to maintain. Available are globe or angle pattern with a full range of adjustments. A variety of material options are also available. Epoxy coating is strongly recommended for all fire system valves (excluding bronze valves).

The 90G-21 and 90A-21 can be supplied with optional internal and external epoxy coating of the main valve wetted surfaces.

The 90G-21 (globe) and 90A-21 (angle) Pressure Reducing Valves automatically reduce a higher inlet pressure to a steady lower outlet pressure regardless of changing flow rate and/or varying inlet pressure. The valves pilot control system is very sensitive to slight downstream pressure fluctuations, and will automatically open or close to maintain the desired pressure setting. The downstream pressure can be set over a wide range by turning the adjustment screw on the CRD pilot control. The adjustment screw is protected by a screw-on cover, which can be sealed to discourage tampering.

Schematic Diagram

Item Description 1 Model 100-01 Hytrol (Globe or Angle) 2 X58C Restriction Tube Fitting 3 CRD Pressure Reducing Control 4 X46A Flow Clean

PRESSURE REDUCING VALVE

Underwriters Laboratories requires the installation of pressure gauges upstream and downstream of the Pressure Reducing Valve. Also, a relief valve of not less than 1/2 inch in size must be installed on the downstream side of the pressure control valve. Adequate drainage for the relief valve discharge must be provided.

Globe Type / Model 50B-4KG1 Angle Type / Model 2050B-4KG1

U.L. Listed.....Sizes 3" thru 8" F.M. Approved.....Sizes 3" thru 8" U.L.C. Listed.....Sizes 2" thru 10"

Typical Application

At pump start, Relief Valve modulates to relieve excess pump capacity, maintaining positive system pressure at the pump discharge. When fire demand slows or ceases, Model 50B-4KG1 opens, diverting entire pump output to discharge, allowing fire pump to be stopped without causing surging in the lines. (Please note that if the Model 50B-4KG1 is to be used on a continuous duty basis to maintain firesystem pressure, suitable back pressure must be provided on the valve to prevent cavitation damage. Consult the factory for details.)

Features

- Fast Opening to Maintain Steady Line Pressure
- Accommodates Wide Range of Flow Rates
- Closes Gradually for Surge-Free Operation
- Adjustable Pressure Settings, Not Affected by
 Pressure At Valve Discharge

The Model 50B-4KG1 Globe / 2050B-4KG1 Angle Pressure Relief Valve is designed specifically to automatically relieve excess pressure in fire protection pumping systems. Pilot controlled, it maintains constant system pressure at the pump discharge within very close limits as demands change. The 50B-4KG1 and 2050B-4KG1 can be supplied with optional internal and external epoxy coating of the main valve wetted surfaces.

Threaded Pressure Relief Valve / Model 55L-60

Features

- Direct Acting Precise Pressure Control
- Positive Dependable Opening
- Drip Tight Closure
- No Packing Glands or Stuffing Boxes
- Sensitive to Small Pressure Variations

The Model 55L-60 (UL Listed FM approved) Pressure Relief Valve is a direct-acting, spring loaded, diaphragm type relief valve. The valve may be installed in any position and will open and close within very close pressure limits. The Model 55L-60 is normally held closed by the force of the compression spring above the diaphragm. When the controlling pressure applied under the diaphragm exceeds the spring setting, the disc is lifted off its seat, permitting flow through the control. When control pressure drops below the spring setting, the spring forces the control back to its normally closed position. The controlling pressure is applied to the chamber beneath the diaphragm through an external tube on the 55L-60. Pressure adjustment is simply a matter of turning the adjusting screw to vary the spring load on the diaphragm. The 55L-60 is available in three pressure ranges; 0 to 75 psi, 20 to 175 psi, 100 to 300 psi. To prevent tampering, the adjustment cap can be wire sealed by using the lock wire holes provided in the cap and cover.

Typical Application

Fire Protection System Service Using the Model 55L-60 in a fire protection system or other closed type system, prevents pressure build-up whenever line pressure exceeds the setting of the spring. The valve will relieve excess pressure to atmosphere preventing damage to the distribution network.

Pressure Restricting Hose Valve / Model AHV - 100 & 200

Sizes available (Nominal): 1 1/2"- 2 1/2"Working pressure: 20.6 bar (300 psi)Finish: Polished BrassConnections: Female threaded NPT inlet and male
threaded NST outletSpecifications: Used with fire hose rack assembly or
fire department outlet connection

How to use the valves?

The valves are capable of adjustment to provide range of the outlet pressure under flowing condition only.

Determining the proper outlet pressure

1-The valves are reducing the downstream water pressure under flowing (residual) condition only.

The valve should not be set to provide less than minimum pressure required by NFPA14 while flowing 250gpm for 2 1/2" size and 100gpm for 1 1/2" size.

NFPA 14-2016 Edition requires that standpipe systems shall be hydraulically designed to provide the required water flow rate at minimum residual pressure of 100psi at the outlet of hydraulically most remote 2 1/2" hose connection and 65psi at the outlet of hydraulically most remote 1 1/2" hose station.

Outlet pressures which do not correspond to NFPA 14 requirements must be authorized by local fire department. There will be a pressure drop due to friction between the outlet and the nozzle.

The amount of this loss should be calculated by qualified personnel, to assure that the nozzle receives water pressure sufficient to design needs.

Note that some fire hose nozzles may not operate properly when valve outlet pressure is set at the 100psi minimum authorized in the 2016 Edition of NFPA 14.

The installer should consult with the fire authorities concerning pressure needed by their equipment.

The outlet pressure indicated in the tables are at the outlet of valve.

2-To determine the pressures at the hose nozzle, the hydraulic calculation information provided in NFPA Fire Protection Handbook should be followed.

3-The valves are designed and listed to reduce inlet pressures under flowing conditions; see the enclosed graphs. Authorities having jurisdiction should be consulted to confirm that the outlet pressures and flowrates are acceptable.

FIRE HOSE VALVES

Installation

1-Pipe unions or rubber gasket fittings are to be installed immediately upstream and downstream of valve to permit easy replacement.

2-Connect the valve to the piping.

- 3-Select setting number from proper graph.
- 4-Close valve hand-tight.
- 5-Loosen set screw in collar.
- 6-Rotate indicator cap until top collar reaches selected setting number.
- 7-Tighten set screw in collar. Valve is now set
- 8-To override pressure restriction, pull spring clip.

Upright / Standart Response – Quick Response

Description

AZ003 /AZ004 Standard / Quick Response Upright sprinklers are designed for use in light and ordinary hazards. The temperature response is standard response (5 mm glass bulb) and quick response (3mm glass bulb). The sprinklers come with compact design, glass bulb type, available in several different finishes and temperature ratings. The upright sprinklers are to be installed in the upright position.

Sprinkler Operation

During a fire conditions, the thermal-sensitive liquid in the glass bulb expands, causing the bulb to shatter, releasing the button and spring seal assembly. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

Care and Handing

Sprinklers must be handled with due care, they must be stored at ambient temprature for best results. Storage as well as any onward shipment is to be made in original packing only. Sprinklers must be visually inspected carefully before installation. Sprinklers visibly damaged, dropped or exposed to temperature in excess of the maximum ambient temperature permitted, should never be installed. Never install any glass blub sprinkler if the bulb is cracked or if there is a loss of liquid from the bulb. Sprinkler must be installed after the piping is in place to prevent mechanical damage. Use Teflon Tape or soft thread sealent on male thread of the Sprinkler for the leak tight Sprinkler joint. Use proper wrench and appropriate torque. Excessive tightening torque may distort the Sprinkler inlet and cause leakage. Sprinkler must never be painted, plated or coated after they leave factory.

The AYVAZ Sprinkler described herein must be installed and maintained in accordance with the latest edition of AYVAZ technical data, the latest standard of National Fire protection Association (NFPA) and UL Listings standard of any other authorities having jurisdiction. The owner is solely responsible for maintaining their fire protection system and device in proper operating condition.

Inspection Testing and Maintenance

Refer to NFPA 25 for inspection testing and maintenance requirement or to the authority having jurisdiction. For details of warranty, refer AYVAZ's current price list, conditions of sale or contact AYVAZ directly.

Pendent / Standart Response – Quick Response

Description

AZ005 / AZ006 Standard / Quick Response Pendent sprinklers are designed for use in light and ordinary hazards. The temperature response is standard response (5 mm glass bulb) and quick response (3mm glass bulb). The sprinklers come with compact design, glass bulb type, available in several different finishes and temperature ratings. The pendent sprinklers must be installed in pendent position. Pendent Recessed Sprinklers are installed with adjustable or non-adjustable Escutcheon plates (also termed as Rosette plates). These are intended to be installed with finished ceilings. Escutcheon plate adjustment provides convenience in Pendent Sprinkler installation in case of areas with finished ceilings or walls.

Sprinkler Operation

During a fire conditions, the thermal-sensitive liquid in the glass bulb expands, causing the bulb to shatter, releasing the button and spring seal assembly. Water flowing through the sprinkler orifice strikes the sprinkler deflector, forming a uniform spray pattern to extinguish or control the fire.

Care and Handing

Sprinklers must be handled with due care, they must be stored at ambient temprature for best results. Storage as well as any onward shipment is to be made in original packing only. Sprinklers must be visually inspected carefully before installation. Sprinklers visibly damaged, dropped or exposed to temperature in excess of the maximum ambient temperature permitted, should never be installed. Never install any glass blub sprinkler if the bulb is cracked or if there is a loss of liquid from the bulb. Sprinkler must be installed after the piping is in place to prevent mechanical damage. Use Teflon Tape or soft thread sealent on male thread of the Sprinkler for the leak tight Sprinkler joint. Use proper wrench and appropriate torque. Excessive tightening torque may distort the Sprinkler inlet and cause leakage. Sprinkler must never be painted, plated or coated after they leave factory.

The AYVAZ Sprinkler described herein must be installed and maintained in accordance with the latest edition of AYVAZ technical data, the latest standard of National Fire protection Association (NFPA) and UL Listings standard of any other authorities having jurisdiction. The owner is solely responsible for maintaining their fire protection system and device in proper operating condition.

Inspection Testing and Maintenance

Refer to NFPA 25 for inspection testing and maintenance requirement or to the authority having jurisdiction. For details of warranty, refer AYVAZ's current price list, conditions of sale or contact AYVAZ directly.

Concealed Pendent / Standart Response – Quick Response

Description

AZ007 / AZ008 Standard / Quick Response Pendent Concealed Sprinklers are thermo-sensitive glass bulb sprinklers having decorative flat cover plate designed to conceal the sprinkler for smooth ceiling. The cover plates are available in several decorative finishes

to match architectural requirements. The unique design allows installation and testing of the sprinkler prior to installation of the cover plate with cup. Sprinkler housing is threaded to fix cover plate with cup assembly to provide 12.7mm (1/2") vertical adjustment. The cover plate and cup design allows installation of the sprinkler and pressure testing of the fire fighting system prior to installation of a suspended ceiling or final painting of the ceiling. The sprinkler

cover assembly can be removed and reinstalled for removal of ceiling panels for access to building service equipments. AYVAZ Pendent Concealed Sprinklers are Standard Response (5mm glass bulb) or Quick response (3mm glass bulb) with standard coverage

Sprinkler Operation

The Sprinkler operating device is state of the art heat responsive frangible glass bulb supplied by a world leader in this innovative technology. The glass bulb contains fluid

which expands when exposed to heat. When rated temperature is reached, the bulb shatters and water flows through the sprinkler and strikes deflector, forming an uniform water spray pattern to control or extinguish fire.

Care and Handing

Sprinklers must be handled with due care, they must be stored at ambient temprature for best results. Storage as well as any onward shipment is to be made in original packing only. Sprinklers must be visually inspected carefully before installation. Sprinklers visibly damaged, dropped or exposed to temperature in excess of the maximum ambient temperature permitted should never be installed. Never install any glass bulbs sprinkler if the bulb is cracked or if there is a loss of liquid from the Bulb. Sprinkles must be installed after the piping is in place, to prevent mechanical damage. Do not attempt to make-up for insufficient adjustment in the Escutcheon plate by over tightening the sprinkler. Use Teflon tape or soft thread sealant on male thread of the sprinkler for leak tight sprinkler joint. Use proper wrench. Use appropriate torque. Excessive tightening torque may distort the sprinkler inlet and cause leakage. Sprinklers must never be painted, plated or coated after they leave factory.

The AYVAZ Sprinkler described herein must be installed and maintained in accordance with the latest edition of AYVAZ technical data, the latest standard of National Fire protection Association (NFPA) and UL Listings standard of any other authorities having jurisdiction. The owner is solely responsible for maintaining their fire protection system and device in proper operating condition.

Inspection Testing and Maintenance

Refer to NFPA 25 for inspection testing and maintenance requirement or to the authority having jurisdiction. For details of warranty, refer AYVAZ's current price list, conditions of sale or contact AYVAZ directly.

Sprinkler Cabinets / Model C-6 / C-12

NFPA 13 requires a representative number of each type and temperature rating of sprinkler head to be kept in a cabinet on the premises. NFPA 13 also requires a special sprinkler wrench to be provided in the cabinet. This allows for immediate removal and replacement of sprinklers that have operated or that have become damaged. Stock of spare sprinklers should include sprinklers of all the types and temperature ratings as are installed in the sprinkler system, in the following quantities:

NUMBER OF SPRINKLERS IN THE SYSTEM	MINIMUM NUMBER OF SPARE SPRINKLERS REQUIRED

FIRE HOSE CABINETS

Dimensions

Specifications

Inside Equipments

•Reel, delivering water at its center, made of material resist of corrosion, EN 671-1 certified.

- Fire hose, round, semi-hard, EN 694 certified.
- 1" line hose between the valve and the reel center.
- 2" fire valve, brass.
- 2" storz coupling (aluminium), threaded inside.
- 2" x 1" storz type reducer (aluminium).
- Reel arm move the reel 270°.
- Nozzle with jet / spray / off modes, comply with UL&FM and EN 671-1.
- Reel hub made of A1 grade DKP sheet metal.
- Real arm painted Black-RAL 9005, reel hub electrostatic powder painted Red-RAL 3002.
- Products are packaged after they have been tested %100.

Demountable Door

- Door made of A1 grade DKP sheet metal or glass, demountable.
- Tempered glass for glass door, 4mm and smoke color.
- The recessed type key is used on the door surface which is not creating raise on the door surface.
- Doors are available as an opening to the right or left direction by rotating 180°.
- FIRE and HOSE warning writing on the door surface which have undeletable, untearable and undeform able properties.
- Painted with electro static powder paint which have 70 micron thickness.
- Standard colors are Red-RAL 3002 and White-RAL 9016. Optional colors and designs are available. (in RAL codes)

Cabinet

- Made of A1 grade DKP sheet metal, recessed or surface.
- Valve fittings on side, top and back of the case.
- Housing for one 6kg fire extinguisher positioned horizontal or vertical also our case can single or double door type.
- Cabinet have installation, ventilation and discharge outlets.
- Console to bear the real, reinforced.
- Cabinet designed for reels used at right and left sides.
- Painted with electro static powder paint which have 70 micron thickness.
- Standard colors are Red-RAL 3002 and White-RAL 9016. Optional colors and designs are available. (in RAL codes)

FIRE HOSE CABINETS

Specifications

Inside Equipments

- 2" or 2 1/2" diameter, 20m or 30m flat fire hose.
- Single or double flat fire hose basket.
- 2" or 2 1/2" Aluminium Branch pipe nozzle with jet / spray / off modes.
- There are two aluminium coupling on the each edge of hose as mounted with clamp.
- Special design hose reel made of A1 grade DKP one piece sheet metal.
- Special design hose basket is painted with 70 micron thickness electro static powder paint.
- Coupling key and reduction adepter are optional equipments.

Demountable Door

- Door made of A1 grade DKP sheet metal.
- Handle, made of stainless Cr-Ni material, recessed.
- Hinge system, made of stainless Cr-Ni material, hidden.
- Doors are available as an opening to the right or left direction by rotating 180°.
- Standard colors are Red-RAL 3002
- Optional colors and designs are available.

Cabinet

- Cabinet made of A1 grade DKP sheet metal.
- Console to bear the real, reinforced
- Cabinet have installation, ventilation and discharge outlets.
- Products are painted with 70 micron thickness electro static powder paint.
- Standard colors are Red-RAL 3002
- Optional colors and designs are available.

Base

- Base made of A1 grade DKP sheet metal.
- Standard colors are Black-RAL 9005.
- Optional colors and designs are available.
- Installation bolts and nuts are not supplying by us.

Roof

- Base made of A1 grade DKP sheet metal.
- The roof is designed to be curved forward and backward.
- Products are painted with 70 micron thickness electro static powder paint.
